SUMMARY

Data and analytics professional with an M.S. in Analytics and 4+ years of experience across banking technology and analytics, specializing in predictive modeling, forecasting, and turning operational data into decisions. Built and deployed machine learning applications end to end — from ETL and feature engineering through model training to production deployment on AWS. Led a 15-member cross-functional team at a global bank and built the reporting automation that replaced a recurring manual process. Seeking data analyst, data science, and analytics engineering roles with a strong predictive component.

TECHNICAL SKILLS

Machine Learning & Statistics: Predictive Modeling, Forecasting, Time Series Analysis, Regression (Linear, Lasso, Ridge, Polynomial, GAM), Classification (Logistic, SVM, Tree-based), Random Forest, XGBoost, Gradient Boosting, Clustering, Anomaly Detection, A/B Testing, Statistical Inference, Model Evaluation (R^2 , AUC, RMSE)

Programming & Query: Python (pandas, NumPy, scikit-learn, PyTorch), SQL, R, JavaScript/TypeScript

Deep Learning & GenAI: CNNs, BatchNorm, Data Augmentation, ResNet Transfer Learning, RAG, Vector Embeddings, FAISS, LLM APIs

Data Engineering: ETL/ELT Pipeline Design, Data Modeling, Data Integration, Data Governance, PostgreSQL, MySQL, SQLite

BI & Visualization: Power BI, Google Looker Studio, Plotly, Chart.js, Matplotlib, Seaborn, Excel (Macros, Pivot Tables, Power Query)

Cloud & Deployment: AWS (EC2, RDS, S3, CloudFront, Elastic Beanstalk, IAM, CloudWatch), Docker, GitHub Actions CI/CD, Render, Git

Platforms & Process: Django, REST APIs, Streamlit, Jupyter, Agile, Scrum, ITSM, Change Management, QA Audit, Jira, ServiceNow

PROFESSIONAL EXPERIENCE

Officer, Technical Analyst II

Nov 2021 – Jul 2024

Bank of America

- Led a 15-member cross-functional QA audit team drawn from teams across the application production support organization — chaired weekly meetings, assigned and tracked daily change-record reviews, and monitored per-reviewer throughput and workload distribution.
- Selected by the outgoing lead to take over the workstream after six months as subject matter expert, and retained the responsibility for the remainder of tenure.
- Built an automated reporting tool replacing a recurring manual process: users select a date range and the tool filters Jira and ITSM exports, generates the full report, and renders supporting charts — saving 100+ operational hours per month across management reporting.
- Served as subject matter expert for ITSM change governance, reviewing every change request across the organization within the 14-day post-implementation window and coaching change coordinators on record quality; sustained a ~96% quality rating in half-yearly global audit reviews.
- Analyzed incident and change data to surface recurring failure patterns, supporting problem management and preventive planning.
- Supported HP NonStop core banking systems underpinning card and transaction processing for 7–8 downstream teams — monitored batch jobs, traffic throughput, and CPU utilization, and executed East/West site failover with post-failover traffic verification.
- Executed quarterly disaster recovery testing across an 8-server, 4-data-center estate, taking two sites offline and validating that remaining capacity absorbed full production load.

Data Visualization & Project Management Intern

Jul 2024 – Oct 2024

Excelebrate — experiential program, Saint Louis University — Remote

- Completed five virtual internship tracks and earned Star Performer recognition in three: Data Visualization Associate, Project Management Trainee, and Innovation & Entrepreneurship Trainee.
- Built CRM and campaign performance dashboards in Google Looker Studio, improving performance visibility for regional managers.
- Conducted cohort and drop-off analysis on outreach data, informing retargeting and content strategy and driving a 15% increase in engagement.
- Cleaned and standardized raw outreach data using Python and Excel, resolving inconsistencies that had disrupted audience segmentation.
- Planned a global virtual event as Project Management Trainee — stakeholder engagement strategy, budget management, and Power BI milestone dashboards.

Data Analyst Intern

2020 – 2021

KreditBee — Remote

- Cleaned, validated, and standardized loan application and customer datasets, improving reliability of downstream reporting.
- Prepared recurring data summaries and exploratory analyses for the analytics team using SQL, Python, and Excel.

PROJECTS

CareFinder — Hospital Cost Analysis & Predictive Decision System

2025 – 2026

M.S. Major Research Project — Python, Django, scikit-learn, SQL, Power BI — Deployed on Render

- Built predictive models forecasting patient visits and treatment cost using Random Forest and XGBoost ($R^2 \approx 0.60$), with 24-month time-series forecasting to project future demand and spend.

- Designed ETL pipelines in Python and SQL integrating 10 synthetic healthcare datasets (patients, encounters, claims, providers, payers) across four states into structured master tables.
- Delivered a full-stack Django application with interactive Power BI, Plotly, and Chart.js dashboards for hospital comparison on cost, coverage, and utilization.

Concrete Crack Detection — CNN & ResNet2025

PyTorch, Gradio — published on GitHub and Hugging Face — Live demo

- Trained and benchmarked three CNN architectures (baseline, BatchNorm, BatchNorm + augmentation) against ResNet transfer learning; augmentation outperformed added depth on unseen surfaces.

Steel Manufacturing Client Purchase Prediction2025

Python, scikit-learn, Streamlit — Published

- Benchmarked eight model families (OLS, Ridge, Lasso, Polynomial, Decision Tree, Random Forest, Gradient Boosting, Neural Networks) on R^2 , Adjusted R^2 , RMSE, and MSE; ensemble methods revealed non-linear drivers of B2B purchasing behavior.
- Deployed an interactive Streamlit application covering data preparation, EDA, model training, and performance comparison.

Secure Business KPI Retrieval Assistant (RAG)2025 – 2026

Python, RAG, Vector Embeddings, FAISS — deployed on Hugging Face — Live demo

- Built a retrieval-augmented assistant over enterprise documents using heading-based chunking; benchmarked OpenAI against MiniLM embeddings (0.65 vs 0.52 top similarity), demonstrating viable open-source deployment at lower cost.

Professional-Client Workflow Platform2026

Independent project — Angular, Django/DRF, PostgreSQL, Flutter, AWS — Walkthrough on request

- Designed and delivered a multi-surface platform: 47-entity data model, three permission-isolated user surfaces, subscription tiering, and automated scheduling; owned product definition, data model, and UX end to end.
- Deployed on AWS (EC2, RDS, S3 with CloudFront, Elastic Beanstalk, IAM, CloudWatch) using blue/green releases validated in a parallel environment before cutover, with GitHub Actions CI/CD.
- Built an internal operations console on data-minimization principles — staff access limited to operational metadata, with an immutable audit log capturing read and write actions — plus a product adoption funnel measuring feature drop-off.

EDUCATION

Master of Science, AnalyticsAug 2024 – May 2026

Saint Louis University — GPA 3.7

Coursework: Applied Analytics, Advanced Analytics (Regression & Classification), Foundations of Analytics, Reporting & Feedback (Power BI), Contemporary Issues in AI (CNNs, ResNet, RAG, Agentic AI), Information Retrieval, Simulation & Modeling, Project Management.

Bachelor of Technology, Computer Science2017 – 2021

SRM Institute of Science and Technology

CERTIFICATIONS

- Academy Accreditation — Generative AI Fundamentals, Databricks Academy (2026)
- Red Hat System Administration (2022)
- Star Performer × 3, Excelerate (2024) | CPR/AED Certification (2024)
